PJLA Update Notification

Update Notification # 102
Update Notification Release Date: 10/21/26
Form/Procedure/Policy: PJLA PL-2 Measurement Traceability Policy Rev 1.14 - Effective Date 11/21/26

Attention All Applicant and Accredited Organizations:

PJLA has updated its mandatory policy, **PL-2, Measurement Traceability Policy**, to **Revision 1.14**.

Summary of Changes

The following changes have been incorporated into the revised policy:

- **Clarification to Section 2.1.2.2:** Language has been revised to clarify the requirements for calibration certificates issued by accredited calibration CABs. Section 2.1.2.2 now states:

  "When using accredited calibration CAB services, the calibration certificates shall be an endorsed report (i.e., include the accreditation body symbol or claim of accreditation traceable to the certificate of accreditation) to be considered satisfactory for metrological traceability purposes."

  This clarification is not considered a substantial change from the previous version of the policy.

- **Traceability from Unaccredited Sources:** The requirement for CABs to obtain prior approval from PJLA before completing **LF-123, Traceability Acceptance Criteria Form**, has been removed. CABs utilizing an unaccredited source are still required to complete LF-123 and maintain the appropriate supporting evidence. The completed form and supporting evidence will be reviewed and approved by PJLA during the assessment.

Implementation Date

Due to the minor nature of these changes, CABs are required to implement the applicable requirements within **30 days of the release date of this notification**. Failure to meet the revised requirements following the 30-day implementation period will result in a finding.

PL-2, Revision 1.14 is now available for download from the document section of the PJLA website. **Revision 1.13 will remain available on the PJLA website throughout**

the 30-day transition period and will be removed when Revision 1.14 becomes effective.

Thank you,

PJLA Management
